DIAGNOSTICS REPORT

Patient Name	: Mr. K.PREM KUMAR	Req Id/No	: 380698
IP No	: 451801	Reg. Date	: 11/04/2025 / 12:52 pm
Ref By	: Self	Collection	: 11/04/2025 /
Ref.doctor	: Dr K BUJJI BABU MS,MCh	Received	: 11/04/2025 / 08:06 pm
Age/Gender	: 28 Years/Male	Report	: 11/04/2025 / 08:06 pm

CT SCAN OF RIGHT FOOT

FINDINGS:

Hairline fracture of the neck of proximal phalanx of right 3rd, 4th and 5th toes.

Comminuted displaced fracture of the base of 1st, 3rd, 4th and 5th metatarsals extending into tarosmetatarsal joints. Undisplaced fracture of the base of right 2nd metatarsal.

Small chip fracture of the anterolateral corners of the cuboid bone and lateral cuneiform bone.

Mildly displaced fracture of the neck of right 2nd metatarsal.

Diffuse soft tissue edema in the dorsum of right leg.

Ankle joint shows normal joint space and articular surfaces.

Rest of the tarsal bones, metatarsals and phalanges are normal.

Intertarsal joints and metatarso phalangeal joints are normal.

Suggested clinical correlation.
